

ADJUSTABLE MOUNTING FOR STUB IDLER APPARATUS

ABSTRACT OF THE DISCLOSURE

A pair of universal mounting brackets for a stub idler assembly accommodates an attachment of the stub idler assembly to either an upper or a lower
5 face of the conveyor support structure, accommodates a wide range of linear adjustment of the stud idler bearing block with respect to the bracket and the conveyor structure and permits variable angular adjustment of the stub idler through an industry standard range of 5° downwardly from the horizontal.
